Name of the Guide		Dr G.Lavanya

Abstract

CampusIQ is an adaptive software system designed to intelligently manage and optimize resources in smart campus environments. The system adapts to changing campus requirements, resource availability, user needs, and usage patterns through continuous monitoring and feedback. It supports dynamic allocation of classrooms, laboratories, equipment, faculty schedules, and other campus resources while identifying conflicts and improving utilization. The system follows adaptive software engineering principles, enabling iterative development, continuous improvement, and flexible response to changing requirements. By combining automation, data analysis, and adaptive decision-making, CampusIQ reduces resource wastage, improves operational efficiency, and provides a scalable solution for managing the evolving needs of modern educational institutions.
